

# DP Examples

---

- Fibonacci
- Binomial Coefficients
- Longest Common Subsequence
- Longest Increasing Subsequence
- Knapsack
- Shortest Path
- Chain Matrix Multiplication
- Edit Distance
- Rod Cutting
- Optimal BST

# Longest Common Subsequence

---

- Given two sequences  $x[1..m]$  and  $y[1..n]$

$$X = \langle x_1, x_2, \dots, x_m \rangle$$

$$Y = \langle y_1, y_2, \dots, y_n \rangle$$

find a maximum length common subsequence (LCS) of  $X$  and  $Y$

- E.g.:*

$$X = \langle A, B, C, B, D, A, B \rangle$$

- Subsequences of  $X$ :
  - A subset of elements in the sequence taken in order  
 $\langle A, B, D \rangle$ ,  $\langle B, C, D, B \rangle$ , etc.

# Example

---

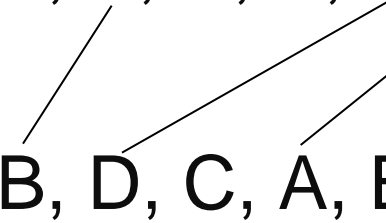

$X = \langle A, B, C, B, D, A, B \rangle$

$Y = \langle B, D, C, A, B, A \rangle$

$X = \langle A, B, C, B, D, A, B \rangle$

$Y = \langle B, D, C, A, B, A \rangle$

- $\langle B, C, B, A \rangle$  and  $\langle B, D, A, B \rangle$  are longest common subsequences of  $X$  and  $Y$  (length = 4)
- $\langle B, C, A \rangle$ , however is not a LCS of  $X$  and  $Y$

# Longest Common Subsequence (LCS)

Application: comparison of two DNA strings

Ex:  $X = \langle A, B, C, B, D, A, B \rangle$ ,  $Y = \langle B, D, C, A, B, A \rangle$

Longest Common Subsequence:

$X = A \quad \mathbf{B} \quad \mathbf{C} \quad \mathbf{B} \quad D \quad A \quad B$

$Y = \quad \mathbf{B} \quad D \quad \mathbf{C} \quad A \quad \mathbf{B} \quad A$

Brute force algorithm would compare each subsequence of  $X$  with the symbols in  $Y$

# Brute-Force Solution

---

- For every subsequence of  $X$ , check whether it's a subsequence of  $Y$
- There are  $2^m$  subsequences of  $X$  to check
- Each subsequence takes  $\Theta(n)$  time to check
  - scan  $Y$  for first letter, from there scan for second, and so on
- Running time:  $\Theta(n2^m)$

# Steps in Dynamic Programming

---

1. Characterize structure of an optimal solution.
2. Define value of optimal solution recursively.
3. Compute optimal solution values **bottom-up** in a table.
4. Construct an optimal solution from computed values.

We'll study these with the help of examples.

# Making the choice

---

$$X = \langle A, B, D, E \rangle$$

$$Y = \langle Z, B, E \rangle$$

- Choice: include one element into the common sequence (E) and solve the resulting subproblem

$$X = \langle A, B, D, G \rangle$$

$$Y = \langle Z, B, D \rangle$$

- Choice: exclude an element from a string and solve the resulting subproblem

# Notations

---

- Given a sequence  $X = \langle x_1, x_2, \dots, x_m \rangle$  we define the  $i$ -th prefix of  $X$ , for  $i = 0, 1, 2, \dots, m$

$$X_i = \langle x_1, x_2, \dots, x_i \rangle \text{ or } x[1, \dots, i]$$

$$Y_j = \langle y_1, y_2, \dots, y_j \rangle \text{ or } y[1, \dots, j]$$

- $c[i, j]$  = the length of a LCS of the sequences

$$X_i = \langle x_1, x_2, \dots, x_i \rangle \text{ and } Y_j = \langle y_1, y_2, \dots, y_j \rangle$$

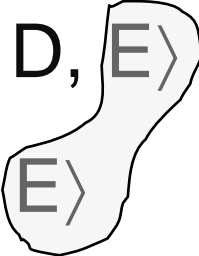

# A Recursive Solution

---

Case 1:  $x_i = y_j$

*e.g.:*  $X_i = \langle A, B, D, E \rangle$   
 $Y_j = \langle Z, B, E \rangle$

$$c[i, j] = c[i-1, j-1] + 1$$

- Append  $x_i = y_j$  to the LCS of  $X_{i-1}$  and  $Y_{j-1}$
- Must find a LCS of  $X_{i-1}$  and  $Y_{j-1} \Rightarrow$  optimal solution to a problem includes optimal solutions to subproblems

# A Recursive Solution

---

Case 2:  $x_i \neq y_j$

*e.g.:*  $X_i = \langle A, B, D, G \rangle$

$Y_j = \langle Z, B, D \rangle$

$$c[i, j] = \max \{ c[i-1, j], c[i, j-1] \}$$

– Must solve two problems

- find a LCS of  $X_{i-1}$  and  $Y_j$ :  $X_{i-1} = \langle A, B, D \rangle$  and  $Y_j = \langle Z, B, D \rangle$
- find a LCS of  $X_i$  and  $Y_{j-1}$ :  $X_i = \langle A, B, D, G \rangle$  and  $Y_j = \langle Z, B \rangle$
- Optimal solution to a problem includes optimal solutions to subproblems

# Overlapping Subproblems

---

- To find a LCS of  $X$  and  $Y$ 
  - we may need to find the LCS between  $X$  and  $Y_{n-1}$  and that of  $X_{m-1}$  and  $Y$
  - Both the above subproblems has the subproblem of finding the LCS of  $X_{m-1}$  and  $Y_{n-1}$
- Subproblems share subsubproblems

# Finding LCS Length

---

Define  $c[i,j]$  to be the length of the LCS of  $x[1..i]$  and  $y[1..j]$

Theorem:

$$c[i, j] = \begin{cases} 0 & i = 0 \text{ or } j = 0, \\ c[i-1, j-1] + 1 & \text{if } x[i] = y[j], \\ \max(c[i, j-1], c[i-1, j]) & \text{otherwise} \end{cases}$$

# LCS Algorithm

---

- First we'll find the length of LCS. Later we'll modify the algorithm to find LCS itself.
- Define  $X_i, Y_j$  to be the prefixes of  $X$  and  $Y$  of length  $i$  and  $j$  respectively
- Define  $c[i,j]$  to be the length of LCS of  $X_i$  and  $Y_j$
- Then the length of LCS of  $X$  and  $Y$  will be  $c[m,n]$

$$c[i, j] = \begin{cases} 0 & i = 0 \text{ or } j = 0, \\ c[i-1, j-1] + 1 & \text{if } x[i] = y[j], \\ \max(c[i, j-1], c[i-1, j]) & \text{otherwise} \end{cases}$$

# LCS recursive solution

---

$$c[i, j] = \begin{cases} c[i-1, j-1] + 1 & \text{if } x[i] = y[j], \\ \max(c[i, j-1], c[i-1, j]) & \text{otherwise} \end{cases}$$

- We start with  $i = j = 0$  (empty substrings of  $x$  and  $y$ )
- Since  $X_0$  and  $Y_0$  are empty strings, their LCS is always empty (i.e.  $c[0,0] = 0$ )
- LCS of empty string and any other string is empty, so for every  $i$  and  $j$ :  $c[0, j] = c[i, 0] = 0$

# LCS recursive solution

---

$$c[i, j] = \begin{cases} c[i-1, j-1] + 1 & \text{if } x[i] = y[j], \\ \max(c[i, j-1], c[i-1, j]) & \text{otherwise} \end{cases}$$

- When we calculate  $c[i, j]$ , we consider two cases:
- **First case:**  $x[i] = y[j]$ : one more symbol in strings  $X$  and  $Y$  matches, so the length of LCS  $X_i$  and  $Y_j$  equals to the length of LCS of smaller strings  $X_{i-1}$  and  $Y_{j-1}$ , plus 1

# LCS recursive solution

---

$$c[i, j] = \begin{cases} c[i-1, j-1] + 1 & \text{if } x[i] = y[j], \\ \max(c[i, j-1], c[i-1, j]) & \text{otherwise} \end{cases}$$

- **Second case:**  $x[i] \neq y[j]$
- As symbols don't match, our solution is not improved, and the length of  $\text{LCS}(X_i, Y_j)$  is the same as before (i.e. maximum of  $\text{LCS}(X_i, Y_{j-1})$  and  $\text{LCS}(X_{i-1}, Y_j)$ )

# LCS Length Algorithm

---

LCS-Length(X, Y)

1.  $m = \text{length}(X)$  // get the # of symbols in X
2.  $n = \text{length}(Y)$  // get the # of symbols in Y
3. for  $i = 1$  to  $m$        $c[i,0] = 0$       // special case:  $Y_0$
4. for  $j = 1$  to  $n$        $c[0,j] = 0$       // special case:  $X_0$
5. for  $i = 1$  to  $m$       // for all  $X_i$
6.      for  $j = 1$  to  $n$       // for all  $Y_j$
7.           if (  $X_i == Y_j$  )
8.                 $c[i,j] = c[i-1,j-1] + 1$
9.           else  $c[i,j] = \max( c[i-1,j], c[i,j-1] )$
10. return c

# LCS Example

---

We'll see how LCS algorithm works on the following example:

- $X = \text{ABCB}$
- $Y = \text{BDCAB}$

# LCS Example (0)

ABCB  
BDCAB

		j	0	1	2	3	4	5
								
i		Y <sub>j</sub>	B	D	C	A	B	
0	X <sub>i</sub>							
1	A							
2	B							
3	C							
4	B							

$X = \text{ABCB}; \quad m = |X| = 4$   
 $Y = \text{BDCAB}; \quad n = |Y| = 5$   
 Allocate array  $c[4,5]$

# LCS Example (1)

# LCS Algorithm Running Time

---

- LCS algorithm calculates the values of each entry of the array  $c[m,n]$
- So what is the running time?

$O(mn)$

since each  $c[i,j]$  is calculated in constant time, and there are  $m*n$  elements in the array

# Finding LCS

		<div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div></div # Finding LCS (2)

		j					
		0	1	2	3	4	5
i	Yj		B	D	C	A	B
0	Xi	0	0	0	0	0	0
1	A	0	0	0	0	1	1
2	B	0	1	1	1	1	2
3	C	0	1	1	2	2	2
4	B	0	1	1	2	2	3

LCS (reversed order): **B C B**

LCS (straight order): **B C B**

# Additional Information

$$c[i, j] = \begin{cases} 0 & \text{if } i, j = 0 \\ c[i-1, j-1] + 1 & \text{if } x_i = y_j \\ \max(c[i, j-1], c[i-1, j]) & \text{if } x_i \neq y_j \end{cases}$$

b & c:

	0	1	2	3		n
	$y_j$	A	C	D		F
0 $x_i$	0	0	0	0	0	0
1 A	0					
2 B	0			$c[i-1, j]$		
3 C	0		$c[i, j-1]$			
	0					
m D	0					

$j$

$i$

A matrix  $b[i, j]$ :

- For a subproblem  $[i, j]$  it tells us what choice was made to obtain the optimal value
- If  $x_i = y_j$   
 $b[i, j] = \nwarrow$
- Else, if  
 $c[i-1, j] \geq c[i, j-1]$   
 $b[i, j] = \uparrow$   
 else  
 $b[i, j] = \leftarrow$

# Example

$$X = \langle A, B, C, B, D, A \rangle$$

$$Y = \langle B, D, C, A, B, A \rangle$$

$$c[i, j] = \begin{cases} 0 & \text{if } i = 0 \text{ or } j = 0 \\ c[i-1, j-1] + 1 & \text{if } x_i = y_j \\ \max(c[i, j-1], c[i-1, j]) & \text{if } x_i \neq y_j \end{cases}$$

If  $x_i = y_j$

$b[i, j] = "$  ↖ "

Else if

$c[i-1, j] \geq c[i, j-1]$

$b[i, j] = "$  ↑ "

else

$b[i, j] = "$  ← "

5	D	0	↑1	↖2	↑2	↑2	↑3	↑3
6	A	0	↑1	↑2	↑2	↖3	↑3	↖4
7	B	0	↖1	↑2	↑2	↑3	↖4	↑4

# PRINT-LCS(b, X, i, j)

---

1. **if**  $i = 0$  or  $j = 0$  Running time:  $\Theta(m + n)$
2.     **then return**
3. **if**  $b[i, j] = \nwarrow$
4.     **then** PRINT-LCS( $b, X, i - 1, j - 1$ )
5.         print  $x_i$
6. **elseif**  $b[i, j] = \uparrow$
7.     **then** PRINT-LCS( $b, X, i - 1, j$ )
8.     **else** PRINT-LCS( $b, X, i, j - 1$ )

Initial call: PRINT-LCS( $b, X, \text{length}[X], \text{length}[Y]$ )

# Improving the Code

---

- What can we say about how each entry  $c[i, j]$  is computed?
  - It depends only on  $c[i - 1, j - 1]$ ,  $c[i - 1, j]$ , and  $c[i, j - 1]$
  - Eliminate table  $b$  and compute in  $O(1)$  which of the three values was used to compute  $c[i, j]$
  - We save  $\Theta(mn)$  space from table  $b$
  - However, we do not asymptotically decrease the auxiliary space requirements: still need table  $c$

# Improving the Code

---

- If we only need the length of the LCS
  - LCS-LENGTH works only on two rows of  $c$  at a time
    - The row being computed and the previous row
  - We can reduce the asymptotic space requirements by storing only these two rows
